(54) POLYESTER COMPOSITION AND FILM THEREFROM

(57)Abstract:

PROBLEM TO BE SOLVED: To obtain a film, comprising a polyester composition containing hydroxyapatite particles having a specific particle diameter and a specific surface area, excellent in slipperiness, abrasion resistance and electric characteristics by specifying a specific resistance value in molten state of the polyester composition.

SOLUTION: This polyester composition includes hydroxyapatite particles having 0.01-10 μm mean particle diameters, 50-500 m^2/g BET specific surface area and ≤ 0.5 relative standard deviation of particle diameters, and has $\geq 0.01 \times 10^9 \Omega \cdot \text{cm}$ specific resistance value in molten state. The film is obtained from the composition. The film can be preferably used for the usage of a magnetic recording medium, a capacitor, a food package, a general industrial use, etc.
